

FutureTech Summit 2026

Event Program

All times are Sao Paulo local time (BRT). Schedule subject to operational changes announced at the information desk.

27 Aug 2026

Time	Room	Session	Track	Speaker / Company
09:00-10:00	Orion	Opening Keynote: Engineering for an AI-Native World	General	Helena Prado / Northstar Systems
10:20-11:10	Aurora	Building Reliable AI Agents	Artificial Intelligence	Mariana Alves / Lumen Forge
11:25-12:15	Aurora	Retrieval-Augmented Generation in Practice	Artificial Intelligence	Rafael Nogueira / Vector Harbor
10:20-11:10	Atlas	Modern Java for Cloud Applications	Cloud & DevOps	Caio Mendes / Nimbus Works
11:25-12:15	Atlas	Designing Resilient Distributed Systems	Software Architecture	Bianca Torres / Redwood Labs
14:00-14:50	Aurora	From Monolith to Modular Architecture	Software Architecture	Lucas Ferraz / Modulon
15:10-16:40	Workshop Lab 1	Hands-on: Evaluating RAG Quality	Artificial Intelligence	Sofia Martins / Signal Pine
16:50-17:40	Atlas	Zero-Trust Patterns for Internal Platforms	Cybersecurity	Eduardo Lima / Cipher Grove

28 Aug 2026

Time	Room	Session	Track	Speaker / Company
09:00-09:50	Aurora	Data Contracts for Reliable Pipelines	Data Engineering	Renata Costa / Streamline Data
10:10-11:00	Atlas	Platform Engineering Beyond the Portal	Cloud & DevOps	Bruno Salles / Cloudsmithy
11:20-12:10	Aurora	Observability for Agentic Systems	Artificial Intelligence	Mariana Alves / Lumen Forge
14:00-15:30	Workshop Lab 2	Threat Modeling Modern APIs	Cybersecurity	Nina Rocha / Cipher Grove
15:50-16:40	Atlas	Event-Driven Architecture: Useful Boundaries	Software Architecture	Tiago Moura / Redwood Labs
17:00-18:00	Orion	Closing Panel: What Engineers Should Learn Next	General	Multiple speakers / FutureTech Program Committee

Selected session descriptions

Building Reliable AI Agents - Practical patterns for tool use, retrieval, failure handling, evaluation and observability in production-oriented agent systems.

Retrieval-Augmented Generation in Practice - Covers document ingestion, chunking, metadata, retrieval quality, grounding and answer traceability using realistic enterprise content.

Modern Java for Cloud Applications - Reviews contemporary Java language features, runtime considerations and service design patterns for cloud deployments.

From Monolith to Modular Architecture - Discusses modular boundaries, incremental decomposition and when a modular monolith is a better choice than distributed services.

Workshop note

Hands-on workshops require an eligible ticket. Premium attendees are eligible without additional registration, but admission remains subject to room capacity.
